Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application.

1. (Previously Presented) A material handling vehicle, comprising:

an operator compartment;

a steering mechanism accessible to an operator standing in both of a fore

vehicle direction and an aft vehicle direction;

a fore operator control handle for selecting a direction and a speed of travel,

the fore control handle being mounted at a first end of the operator compartment and

configured for operation in the fore vehicle direction;

an aft operator control handle for selecting a direction and a speed of travel,

the aft operator control handle comprising a twist grip handle mounted to a second end of the

compartment and configured for operation in the aft vehicle direction; and

a traction system controlled by the fore and aft operator control handles to

drive the material handling vehicle in a selected direction, wherein the steering mechanism is

mounted to be accessible to an operator facing the first end of the operator compartment and

controlling the fore operator control handle and to an operator facing the second end of the

compartment and controlling the aft operator control handle.

2. (Previously Presented) The material handling vehicle as defined in claim 1,

wherein the fore operator control handle is a multi-function control handle.

Appl. No. 10/631,239 Amdt. Dated January 2, 2007

Response to Office Action of June 30, 2006

3. (Previously Presented) The material handling vehicle as defined in claim 1,

wherein the aft operator control handle includes a smooth outer grip.

4. (Original) The material handling vehicle as defined in claim 3, wherein the

smooth outer grip is a thermoplastic.

5. (Original) The material handling vehicle as defined in claim 1, wherein the

second handle includes recessed grooves.

6. (Previously Presented) The material handling vehicle as defined in claim 1,

further comprising a floor in the compartment, and a floor switch mounted to the floor in a

position accessible by an operator using either the fore control handle or the aft control

handle.

7. (Previously Presented) The material handling vehicle as defined in claim 1,

wherein the aft operator control handle is mounted at an angle as referenced to the side of the

compartment selected to be substantially perpendicular of the arm of the operator when

operating the control.

8. (Previously Presented) The material handling vehicle as defined in claim 1,

wherein the steering mechanism is a steering wheel mounted to the compartment to allow an

operator to rotate the steering wheel when using either the fore operator control handle or the

aft operator control handle.

3

Appl. No. 10/631,239 Amdt. Dated January 2, 2007 Response to Office Action of June 30, 2006

- 9. (Previously Presented) The material handling vehicle as defined in claim 1, wherein the aft operator control handle is mounted to the compartment a distance from the floor selected to provide a comfortable grip for users of varying heights.
- 10. (Original) The material handling vehicle as defined in claim 9 wherein the distance from the floor is substantially thirty-eight inches.
- 11. (Previously Presented) The material handling vehicle as defined in claim 1, wherein the aft operator control handle includes a horn actuator for activating a horn.

Appl. No. 10/631,239

Amdt. Dated January 2, 2007

Response to Office Action of June 30, 2006

12. (Previously Presented) An operator compartment for a material handling

vehicle comprising:

a first control handle mounted for access by an operator facing a first direction;

a second control handle mounted for access by an operator facing a second

direction, the second control handle being mounted to be a distance from a floor of the

compartment and at an angle referenced to a side of the compartment selected to be

perpendicular to the arm of the operator while in use;

a floor switch positioned on a floor of the compartment in a location selected

to be accessible by an operator using either the first control handle or the second control

handle; and

a steering wheel positioned in the compartment in a location selected to be

accessible by an operator facing the first direction and using the first control handle and to an

operator facing the second direction and using the second control handle, wherein the first

handle is rotational in the first direction for motion in a first vehicle direction and the second

handle is rotatable in the second direction for motion in a second vehicle direction.

13. (Original) The material handling vehicle of claim 12, wherein the first and

second vehicle directions are the fore and aft directions of the vehicle.

14. (Original) The material handling vehicle of claim 12 wherein the second

control handle is substantially horizontal.

5

Appl. No. 10/631,239 Amdt. Dated January 2, 2007

Response to Office Action of June 30, 2006

15. (Original) The material handling vehicle of claim 12 wherein the distance

from a floor is substantially thirty-eight inches.

16. (Original) The material handling vehicle as defined in claim 12, wherein the

first and second control handles are each rotational around a substantially horizontal axis.

17. (Original) The material handling vehicle as defined in claim 12, wherein each

of the first and second control handles are rotational in the second and first directions,

respectively, to provide a control signal indicative of motion in the direction opposite the

direction the operator is facing.

18. (Original) The material handling vehicle as defined in claim 12, wherein the

second control handle is a twist grip handle.

19. (Original) The material handling vehicle as defined in claim 13, wherein the

angle is substantially seventy degrees.

20. (Original) The material handling vehicle as defined in claim 13, wherein the

second control handle comprises a horn actuator.

6

21. (Currently Amended) A lift truck, comprising:

a fork;

an operator station from which the operator drives the lift truck, the operator station being at least partially surrounded by an enclosure;

a fore operator control mounted for access on the enclosure, the first operator control being provided adjacent the fork and configured for an operator facing the fork to select a direction travel;

an aft operator control mounted for access on the enclosure, the aft operator control comprising a twist grip handle provided near an end of the compartment opposite the forks and configured to be substantially perpendicular to the arm of the operator while controlling the aft handle to drive the lift truck in an aft direction;

a steering mechanism mounted for access on the enclosure, the steering mechanism being accessible by an operator to select a direction of motion while controlling the fore control handle and facing the fork and controlling the aft control handle and facing the end of the compartment opposite the fork; and

a traction system connected to at least one of the fore and aft control handles to receive the control signal indicative of a direction of travel.

22. (Original) The lift truck as defined in claim 21, wherein the aft control handle is mounted in the operator compartment for access during aft stance operation.

Appl. No. 10/631,239 Amdt. Dated January 2, 2007 Response to Office Action of June 30, 2006

- 23. (Original) The lift truck as defined in claim 21, wherein the aft control handle includes a smooth outer coating.
- 24. (Original) The lift truck as defined in claim 21, wherein the aft control handle is mounted at a height selected to be comfortable for operators of varying heights.
- 25. (Original) The lift truck as defined in claim 21, wherein the aft operator control includes grooves for improving gripping.
- 26. (Original) The lift truck as defined in claim 21, wherein the twist grip operator control is positioned to provide stability to an operator facing the end of the lift truck opposite the fork.
- 27. (Original) The lift truck as defined in claim 21, wherein the twist grip operator control is rotational to provide movement in either of a fore or an aft direction of travel.
 - 28. (Original) The lift truck as defined in claim 21, wherein the twist grip operator control includes a horn actuator for actuating a horn.
